Job Application IT Architecture Manager

Dear Hiring Manager,

from your web site I note with interest that you are currently hiring and I hereby wish to apply for the position of IT Architecture Manager. During my professional career I have gained considerable experience in leading teams of software engineers in development and consulting projects to build high-quality IT products across the full value chain from scratch to deployment, including but not limited to software system architecture using state-of-the-art cloud technology.

In my operative and strategic roles in IT projects I cover all areas from ideation, analysis of digital business, inception and coordination of digital product roadmaps, requirements engineering, IT architectures and project development. Here I utilize a toolbox with methods and technologies in early project scoping (e.g. business model canvas, customer journey mapping), established techniques and tools in requirements engineering, modern software architectures and frameworks as well as frameworks and tools for team collaboration.

I enjoy driving my team to success in terms of project work and career development in an agile, collaborative and empowering culture, that values commitment, feedback, communication, courage and respect. In my previous roles I have been responsible for team building and talent management across recruiting, qualification and retention, including identification of performance and development potential of team members, advancement and dissemination of methods and technology competence within my team.

Now, I am inspired to pursue my interests for innovation at E.ON and I am eager to take on new responsibilities in a challenging role. I look forward to meeting you in person and hope to hear from you soon. Please let me know if you require any additional information.

Yours sincerely,

Dr. Tobias Griebel
