

Dr. Tobias Griebe

ENGINEERING DIRECTOR · IT DEPARTMENT HEAD

Goethestraße 10 · 15345 Eggersdorf · 0159 06303187 · griebe.tobias@gmail.com

WORK EXPERIENCE

since 12/2025

Head of Consulting — Cloudfactory GmbH

RESPONSIBILITIES & RESULTS

As Head of Consulting, Dr. Griebe leads the strategic consulting of enterprise project partners on digital platform development and modern engineering organisations. A central mandate is advising **50Hertz Transmission GmbH / Elia Group**, one of Europe's leading transmission network operators, on building a scalable digital developer platform. Responsibilities encompass platform strategy design, delivery management, and executive-level communication with the client.

AI INTEGRATION & DEVELOPER VELOCITY

A core element of the platform strategy is the design of developer tooling ecosystems that sustainably accelerate internal development cycles. This includes the integration of AI-assisted development tooling, automation of test and deployment pipelines, and building self-service platform capabilities that free development teams from central infrastructure bottlenecks.

TECHNOLOGY, METHODS & GOVERNANCE

Consulting mandates focus on cloud-native developer platforms, platform engineering, DevOps organisational models, and scalable delivery structures for complex enterprise environments in regulated infrastructure sectors.

02/2023 – 11/2025

Engineering Director — sevDesk GmbH, Offenburg

RESPONSIBILITIES & RESULTS

As Engineering Director, Dr. Griebe is responsible for two of the three pillars of sevDesk's R&D organisation: Platform Engineering and Growth & Retention. As one of Germany's leading cloud accounting providers in the SME segment, sevDesk grows at high velocity; both areas are directly and strategically involved. He oversees roadmap, technical vision, and architecture strategy across both areas, managing headcount and hiring budget in close alignment with the executive team. A central outcome of his tenure is the initiation and management of a company-wide application modernisation programme, migrating the grown product landscape to a cloud-native, containerised target architecture (Kubernetes/Docker on AWS). The technical roadmap is aligned via the OKR framework and operationalised into measurable quarterly goals.

LEADERSHIP & ORGANISATIONAL DEVELOPMENT

Dr. Griebe has disciplinary leadership of 6 Engineering Managers, making him indirectly responsible for over 40 software developers across product feature teams and cloud infrastructure teams. A central focus was the strategic formation of the Platform Engineering pillar as a standalone unit within the R&D organisation, including full ownership of the hiring process for a dedicated Engineering Director position. He established a company-wide career framework and performance management system that creates structured development pathways, transparent evaluation criteria, and a performance-oriented feedback culture.

AI INTEGRATION & DEVELOPER VELOCITY

Under Dr. Griebe's leadership, a strategic shift-and-lift programme of the entire development infrastructure from GitLab to GitHub was executed. The programme encompassed the full transformation of CI/CD pipelines and automation landscape under a rigorous DevSecOps approach: security scanning, dependency auditing, and compliance checks are now embedded as integral components of every delivery pipeline. The migration to GitHub Actions simultaneously creates the technical foundation for targeted integration of AI-assisted development tools and automated code quality pipelines.

TECHNOLOGY, METHODS & GOVERNANCE

The product stack includes Spring Boot/Kotlin, PHP, and React; the platform infrastructure runs on Docker and Kubernetes in AWS. Dr. Griebe established architectural standards and API-first principles as

well as Architecture Decision Records (ADRs) as a governance instrument. The compliance-aligned cloud infrastructure explicitly addresses GoBD requirements. Observability is ensured through Datadog, New Relic, and PagerDuty; on-call programmes and incident management processes are firmly established.

04/2021 – 01/2023

Head of Software Development and Platform Architecture — Würth Cloud Services GmbH, Bad Mergentheim

RESPONSIBILITIES & RESULTS

At Würth Cloud Services, Dr. Griebe was responsible for both the modernisation of existing legacy systems and the parallel build-out of new platform components — in an environment combining the IT governance of a near-DAX corporate group with the speed of change of a startup. The system landscape targeted small and medium-sized craftsmen businesses, integrating mobile and stationary applications in a scalable cloud environment. Definition of the target architecture, prioritisation of the modernisation portfolio by business value, and management of operations and further development were solely his responsibility, including headcount and investment budget management in close coordination with Würth IT and the corporate board.

LEADERSHIP & ORGANISATIONAL DEVELOPMENT

Dr. Griebe built the engineering team from scratch, leading frontend and backend developers as well as mobile engineers across the full employee lifecycle: from recruiting and onboarding through qualification and career development to targeted retention measures. In the corporate-backed startup context, he established a leadership culture combining technical excellence with entrepreneurial thinking and personal accountability. Disciplinary and functional leadership spanned cross-functional teams and required communication both within Würth Group's corporate structures and with external development partners.

TECHNOLOGY, METHODS & GOVERNANCE

The platform architecture was based on Red Hat OpenShift in the Würth corporate data centre, complemented by Docker and Kubernetes for container orchestration; the product stack included PHP, TypeScript/JavaScript, Node.js, Java, Spring Boot, React, and Flutter. Architecture decisions were made and documented in alignment with Würth Group's IT governance and security standards. Operations, monitoring, and incident management were the team's responsibility; integration into Würth's IT infrastructure required structured change management processes and regular reporting at corporate level.

09/2019 – 03/2021

Lead Product Manager — Durstexpress GmbH, Berlin

RESPONSIBILITIES & RESULTS

Product management for an extensive IT application landscape in retail, warehouse, and logistics in a hyper-growth environment with significant scaling velocity. Dr. Griebe designed and led the implementation of a mobile B2B/B2E software solution for over 3,500 warehouse and logistics workers, and developed a scalable system architecture in a Microsoft-based cloud environment with Docker and Kubernetes. C-level stakeholder management, requirements engineering, and agile project management (Scrum, Kanban) bridged business and engineering.

LEADERSHIP & ORGANISATIONAL DEVELOPMENT

Disciplinary and functional leadership of cross-functional software teams across the full employee lifecycle: recruiting, qualification, career development, and retention in a hyper-growth context under high scaling pressure. Dr. Griebe established the product management function as an independent organisational unit and created structured development pathways and evaluation frameworks for the growing PM organisation.

EDUCATION

04/2017

Doctorate Dr. rer. nat. / PhD — *summa cum laude*

"Method and Technology for Model-based Automation of Software Tests for Context-Aware Mobile Applications"

SKILLS

LEADERSHIP & PEOPLE DEVELOPMENT

Disciplinary and functional leadership of technical teams at all levels — from individual contributors to Engineering Managers. Building and steering teams across the full lifecycle: recruiting, onboarding, qualification, career development, and retention. Coaching and mentoring of managers and individual contributors. Performance and potential evaluation; goal-oriented use of people development instruments. Team health assessments; fostering psychological safety and team cohesion.

ENGINEERING MANAGEMENT & IT GOVERNANCE

Technical vision and roadmap ownership across multiple teams and products. IT governance: rollout of SAST tooling in CI/CD pipelines (GitLab, GitHub Actions), mandatory workload tagging, security policies. Observability: Datadog, New Relic, PagerDuty, Sentry. On-call and incident management programs. Architecture documentation with Arc42. DORA metrics as a steering instrument. Organizational design and career frameworks for engineering organizations.
